

Supplemental Figure S1. X-tile plots of TBS on ICC cohorts. (A, B) The X-tile plot of TBS on a cohort of ICC; **(C)** The TBS histogram is truncated at 5.3 to visualize the low/high-TBS group; **(D)** The optimal population division occurs at TBS = 5.3. When these cut-points are applied to a separate cohort of ICC, they are found to be statistically significant ($p = 0.00063$).
